### ▼ Create an array of 20 linearly spaced points between 0 and 1:

### ▼ Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
mat = np.arange(1,26).reshape(5,5)
mat
```

```
array([[ 1,  2,  3,  4,  5],
       [ 6,  7,  8,  9, 10],
       [11, 12, 13, 14, 15],
       [16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat[2:6,1:6]
```

```
array([[12, 13, 14, 15],
       [17, 18, 19, 20],
       [22, 23, 24, 25]])
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat[3:4,4:6]
```

```
array([[20]])
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW  
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T  
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat[0:3,1:2]
```

```
array([[ 2],  
       [ 7],  
       [12]])
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW  
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T  
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat[4:6,0:6]
```

```
array([[21, 22, 23, 24, 25]])
```

```
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW  
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T  
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
mat[3:6,0:6]
```

```
array([[16, 17, 18, 19, 20],  
       [21, 22, 23, 24, 25]])
```

## ▼ Now do the following

### ▼ Get the sum of all the values in mat

```
sum=np.sum(mat)  
sum
```

```
325
```

### ▼ Get the standard deviation of the values in mat

```
sd=np.std(mat)  
sd
```

```
7.211102550927978
```

- ▼ Get the sum of all the columns in mat

```
col=np.sum(mat,axis=0)
col
array([55, 60, 65, 70, 75])
```
